

FOREWARN Expands into Home Healthcare, Bringing Real-Time Safety Intelligence to Caregivers Nationwide

July 20, 2026

Standard bearer in proactive safety solutions delivers its data-driven insights to home healthcare professionals to enable physical safety and risk management

BOCA RATON, Fla., July 20, 2026 (GLOBE NEWSWIRE) -- FOREWARN, LLC, a red violet company (NASDAQ: RDVT) and a leading provider of data-driven safety solutions, today announced its expansion into the home healthcare industry. The new offering, FOREWARN for Home Healthcare, addresses a significant occupational risk by equipping home healthcare providers and agencies with pre-visit household insights, helping caregivers enter unfamiliar residences with greater awareness and giving organizations a documented, proactive approach to workforce safety.

Home healthcare professionals routinely deliver care in environments that are unknown, unpredictable, and uncontrolled. Workplace violence, harassment, and unfamiliar household conditions are well-documented occupational hazards in the industry, and many incidents go unreported, leaving agencies with limited insight into the true scope of risk their workforce faces daily.

FOREWARN was purpose-built to close this knowledge gap, giving organizations real-time safety intelligence to help assess risk before a caregiver arrives at a patient's door. Professionals and organizations can instantly verify identity while also gaining insight into potential criminal history and sex offender status of possible household occupants.

FOREWARN makes it easy for both individuals and organizations to access the information they need to improve provider safety in the field. For individuals, FOREWARN gives caregivers, schedulers, and supervisors on-demand, pre-visit insights wherever they are via the mobile app and is also accessible via web interface. For organizations seeking a more integrated solution, a flexible API connects FOREWARN's data directly into an agency's existing scheduling, electronic health record (EHR), or workforce management system.

For agencies, the benefits extend well beyond a single visit. FOREWARN helps build caregiver confidence and strengthen retention, equips staff with pre-visit situational awareness, and supports workplace violence prevention efforts.

"Home healthcare workers deliver critical care in environments that are at times unpredictable or unsafe, often alone and without the visibility and safeguards that their colleagues in hospitals or other facilities take for granted," said James Reilly, red violet President. "Supporting caregiver safety isn't just the right thing to do, it's essential to protecting an organization's people, reputation, and mission. Whether an agency needs a solution built for individual caregivers or one embedded across its workforce systems, our goal is to make sure no caregiver walks into a home unprepared."

This marks FOREWARN's most significant expansion beyond real estate, an industry where its solutions have grown to serve a community of more than 417,000 users and 640 REALTOR® associations nationwide. That growth was built on a simple premise: professionals who meet people they don't know well, in settings they don't control, deserve better visibility into potential risks before they walk through the door. The same challenge exists in the home healthcare industry, where FOREWARN's solutions are now readily available to the estimated over 4 million home health aides and more than 12,000 Medicare-certified home health agencies that exist in the United States.
